# QualityFriend DEV – Test Report

For: Fahad (ARFASOFTECH) · From: Klaus Pichler, Hotel Weihrerhof · 19 October 2026

Hi Fahad, I tested all modules on DEV in four rounds on desktop (17–19 Oct) as Admin, Management and Employee, including direct URL and API access, plus two screen recordings on a real Android phone. **Access control works on the API level – great work.** Before sign-off, please fix the **47 points** below. **Priority 1 blocks go-live.** Test data on DEV is marked “TEST”. The numbers stay the same in all our communication.

## 1. AI is not fully integrated yet

As you said, the AI features are still in progress, so all AI-related points in this report are observations of the current state, not acceptance criteria. We will test AI separately once it is integrated. **AI Revenue Forecast** is not properly integrated yet because the AI is missing, so it was **not tested** and is excluded from this report.

| Status | AI feature |
|---|---|
| Real AI already working | Applicant scoring + summary; job ad and quiz generation; AI assistant (General, Recruiting, Schedule) with hotel data and permission checks; automatic translation DE / IT / EN |
| Demo / placeholder | Dashboard daily briefing; handover AI summary + “Fill new handover with AI”; AI task prioritisation; schedule AI suggestion; “Reply to review”; AI Revenue Forecast; weather |
| Not connected / unclear | Knowledge base (manuals AI, needs MCP); training files; housekeeping AI allocation (no visible effect) |

**Please clarify:**

1. Is this split correct? Which AI features are done, which are coming and when?
2. Which AI provider is active? Settings show OpenAI (ChatGPT) – we agreed on Claude for writing / analysis (plus Perplexity and DeepSeek via the provider config).
3. Does the knowledge base strictly require MCP, or can it work without it?
4. Until AI is integrated, please hide demo texts (“Zorah”, “Maria R.”, “Wednesday 19 Aug”) or label them clearly as “Demo”.

## 2. Priority 1 – must fix before go-live (15)

| # | Module | Issue (observed) | Expected |
|---|---|---|---|
| 1 | Settings / API | /api/settings/ai-keys returns 200 for Employees; Management sees and can change the AI key | Admin only; never send the key to the browser |
| 2 | Tasks | Employees can see and edit personal tasks assigned to other users | Only own + own department tasks; edit only by creator/manager |
| 3 | Housekeeping | Housekeepers can reassign the cleaner, change the guest's cleaning preference and set “Inspected” (also confirmed on the phone) | Housekeeper: dirty / cleaning / clean + DND / breakfast flags only |
| 4 | Checklists | A checklist can be completed with unchecked items and no comment; no item states, no delegation | Per item: open / done / exception (mandatory comment); per-item delegation |
| 5 | Recruiting | “Send offer” sends a system email (preview is fine) | As agreed: status change + “Open mail” / “Open WhatsApp” with template, no system mail |
| 6 | Recruiting | “Reject” sends immediately after confirm | Choice “send automatically” vs “I’ll contact them”; automatic rejections delayed 24–48 h |
| 7 | Recruiting | A text-based PDF CV could not be read; AI scored the applicant 0% “Not a fit” | Fix PDF extraction; if unreadable show “not assessable”, never 0% |
| 8 | Recruiting | Privacy notice shows “not yet stored”, no field to enter it; “other positions” consent not shown in the application | Editable privacy text per language; show consent status on the applicant |
| 9 | Schedule | “Copy week” copies vacation/sick days; they appear in the CSV payroll export but not in the absence list | Copy shifts only; export only approved absences |
| 10 | Schedule | Export offers Excel + CSV, no PDF | PDF week view (absences without reason), as agreed |

| # | Module | Issue (observed) | Expected |
|---|---|---|---|
| 11 | Manuals / AI | Knowledge base fails silently (MCP_NOT_ACTIVE); uploaded manuals are not indexed | Index manuals without MCP, or show a clear message with what to do |
| 12 | API | No API keys for external systems (n8n etc.) | Per-hotel API keys + documented JSON endpoints (open API is part of the project) |
| 25 | Tasks | No image upload / screenshot, no comments, no priority (confirmed by Klaus on the phone) | Same attachments (paste screenshot, photo, files) as handovers |
| 44 | Housekeeping | Breakfast function still not working – field is still “Breakfast in room” | It means “guest is at breakfast” (room free to clean): visible marker on the board, auto-reset after 30 minutes – same logic as the old system |
| 46 | Housekeeping | Board does not reflect saved changes. Room 45: guest preference changed from “No cleaning wanted” to “Daily” / “As needed” and saved – room detail shows the new value, board still shows the red “no service” icon. Same as Admin. (DND on room 48 works.) | Board always reflects the saved room data and updates automatically without reload |

## 3. Priority 2 – functional bugs (20)

| # | Module | Issue (observed) | Expected |
|---|---|---|---|
| 13 | Recruiting AI | “Generate with AI” / quiz AI writes English for a German ad (title too); start date ignored (“From now on”); invents benefits (“holiday bonuses”), drops given ones (board and lodging); city “test, BZ” | Write in the listing’s primary language; use only entered facts |
| 14 | Recruiting | Thank-you page English on German ad; IT page keeps “Ritten” (should be “Renon”); “Start” not translated | Translate all fields |
| 15 | Recruiting | Quiz template placeholders “[job title] in [city]”, “wood art” | Fill or hide placeholders |
| 16 | Recruiting | Email greeting always “Lieber {{name}}” | Use selected salutation (Herr / Frau / Divers) |
| 17 | Recruiting | Restoring an archived draft sets it to Active (published) | Restore to previous status |
| 18 | HR | HR employees and system users are separate lists; training “valid until” can be before completion | Link HR record and user; validate dates |
| 19 | Schedule | No plausibility warnings (16 h shift saved); empty break not deducted; no delete for shifts/absences; no split shift | Warnings, default break, delete, split shift |
| 20 | Schedule | Sick leave silently overwrites a shift; Publish has no confirmation and publishes all pending weeks | Warn on conflict; confirm + choose week |
| 21 | Schedule | Statistics count multi-department staff once per department | Count each person once |
| 22 | Housekeeping | Max Mustermann shown on the board for rooms 43–45 but “Unassigned” in room detail and missing in daily plan (confirmed on phone); “Today only” not distinguishable in Permanent view | Consistent assignment; show today-only overrides |
| 23 | Housekeeping / i18n | DE “No service” shown as “Täglich gereinigt”; a repair title translated into Swedish | Fix labels; restrict translation to DE / IT / EN |
| 24 | Housekeeping / Repairs | “Angebot” category and Room 100/200 (ASA offer pseudo-rooms) appear | Filter out on import |
| 26 | Checklists | No due time, items not reorderable; past weeks shown as OPEN in “Periodic checks (this week)” | Due time, drag-and-drop, overdue state |
| 27 | Manuals | Delete is permanent (not in recycle bin); no edit | Soft delete + edit / replace file |
| 28 | Global | Native confirm() / alert() dialogs (e.g. delete manual) | In-app dialogs |

| # | Module | Issue (observed) | Expected |
|---|---|---|---|
| 29 | AI assistant | Some answers in English to German questions; “Reply to review” is a placeholder | Answer in user language; connect review assistant |
| 41 | Mobile | Create handover on phone: editor toolbar takes 3 rows, with keyboard open only one line of text visible, Save not visible | Compact / collapsible toolbar, sticky Save button |
| 42 | Checklists | Daily recurring checklist appears twice for the same day (19 Oct) | One instance per day |
| 45 | Housekeeping | Additional jobs only have a checkbox | On completion: who/when stored, optional comment + photo, “not done” with reason |
| 47 | Housekeeping | Room 45 shows a check (clean) on the board but “Dirty” in room detail | Same status everywhere |

## 4. Priority 3 – minor (12)

| # | Issue |
|---|---|
| 30 | Custom roles cannot be deleted; auto-translated department names not editable |
| 31 | Employee “My plan” has no week navigation; absence form shows all employees to an Employee (backend correctly saves for self) |
| 32 | Rejecting an absence has no reason field |
| 33 | “Best listing” picks a posting with 0 clicks; job image and favicon mandatory (favicon should default to hotel logo) |
| 34 | Activity log shows the import as “Deleted user” and entries with empty titles |
| 35 | Training files page: “could not be loaded”; repair templates require a location |
| 36 | Nameless additional HK job “--” exists and is assigned by AI allocation |
| 37 | Handover list attachment thumbnail empty; no read status per user |
| 38 | Mobile: room grid scrolls sideways (confirmed on phone), page titles cut off, no “Report” (Melden) quick button |
| 39 | Demo “Zorah” alert in schedule |
| 40 | Dashboard shows a “Budget” tile although the Budget module was dropped |
| 43 | Schedule AI suggestion names a non-existent person “Maria R.” (Demo) |

## 5. Verified OK – no action needed

API-level access control (users / roles / recruiting return 403), department visibility of handovers and notes, private notes, custom roles, uploads / screenshots in handovers and checklists, translation DE / IT, quiz save (502 fixed), campaigns with click tracking, public apply page + application intake, absence request → approve / reject, shift swap, publish + notification, CSV export, recurring checklists, templates and drafts, room checks per room, HK category delete, recycle bin, activity log, notifications. On the phone (Android): navigation and “More” menu, room status change, DND marker on the board, repair with photo from gallery, “Today only” assignment reverts overnight, Express recalculated overnight.

Not tested yet: camera photo upload, iPhone, PWA install, Team Lead / custom role logins, AI Revenue Forecast.

Please reply with an estimate per priority. Thanks!
